Abstract

*DWelling is an essential form of conscious human activity. The form, aesthetics or beauty, and organization of environment that build become part of how a person lives. The concept of dwelling itself closely related to time and space. Therefore, the concept may shift or replaced according to the phenomena that occurred during the period of time. It is the same thing that we feel today in the presence of COVID – 19. Newly promoted health protocols, such as social isolation creates domino effect. Outdoor activities must be carried out in the dwelling, causing the shelter to need a place to accommodate these new needs. This also creates new problems with the existence of various age groups in one family. With the aim of creating a family ecosystem in one dwelling based on issue of social isolation that interferes with how to interact, the Architectural Programming (Cherry, 2009) method are applied and also points from MASS : Designing senior housing for safe interaction (2020). The application of this method produces programs that suit the needs of each age group in a family as well as paying attention to initial issue, in this case social isolation. One for Three: Multigenerational House is a new shared space concept that combines the needs of three generation and attention to safe interaction in social isolation. In addition, One for Three: Multi-generational House retains the value of independence and identity in all group of age.*

*Keywords : group of age; multigeneration; safe interaction; shared space; social isolation*
